

# Solution to Moving the Booty

By Brandon Bray

Most of the work is just finding where the directions start and finish. Spend time looking at maps on a service such as Microsoft Virtual Earth (<http://maps.live.com>) to determine:

	<u>Starting Point</u>	<u>Ending Point</u>
#1	Sarcillo, Colorado	Clasoil, Montana
#2	Doran, Washington	Nord, California
#3	Brooten, Minnesota	Oberon, North Dakota
#4	Chesnee, South Carolina	Neches, Texas
#5	Cordero, Nevada	Correo, New Mexico

The flavor text indicated that city to city was important. Looking at the cities, the starting point has one more letter than the ending point. The other letters are the same.

Taking those letters and putting them together provides the solution, **RATED**.
