

Solution to Resistance is Futile

By Joy Ebertz

Solution guidelines:

- The first thing you need to notice is that the colors all correspond to resistor colors.
- When you replace all the colors with the numbers, you get a standard paint-by-number type puzzle. (this is solved by logic, realizing that the numbers correspond to the number of consecutive shaded blocks there are in that row)
- After filling that in, you get the image below which is a **PENGUIN**.
