

# Solution to Change of Address

By Brandon Bray

While the addresses can be found on a map, they do not identify real buildings. There are two clues:

1. The **ADD** in address is capitalized.
2. The confirmation code that R.E.D.T.AP.E. sends back is seven letters.

Both addresses contain seven numbers between the number and the street name. Add the two together:

8	9	9	7	1	3	2
1	3	3	8	6	6	1
<hr/>						
9	12	12	15	7	9	3

Using the summed numbers to index into the alphabet spells the solution, **ILLOGIC**.
