

# Poker Alice

By: Melitta Riley

To solve this puzzle, you need to index Alice's winnings into the names of the casinos to get letters. You count from the front of the name if Alice won at that casino, and you count from the back if Alice lost. So for example, winning **5** hundred dollars at the **Venetian** gets you the letter T. Then to order the letters, you must place them according to the physical locations of the casinos on a map. If you read top-to-bottom on each side of the street, you end up with the solution to what Alice will buy: **ALL THE THINGS**.
