

To Egypt From Luxor

By: Philip Z Loh

Making an L shape in the first paragraph are letters that make the phrase "Unicode table". The second paragraph hints strongly at fonts and chars (characters), so the solver searches the internet for what Unicode charset includes Egyptian hieroglyphs. The solver discovers that Unicode.org published a PDF for Egyptian Hieroglyphs, Range: 13000 1342F, in Unicode 6.

Examining the pyramid of hieroglyphs, the solver realizes that each row in the pyramid comes from a different column in the table on Page 2 of the PDF. If the solver decides to use a different table, then the table dimensions ("14 columns, 16 rows") would help frame the picture, and put to an end the question "should I rotate this". However, as hinted by "broken columns", they might not be a contiguous chunk. To assist the solver, in each row, the hieroglyphs were kept in the original order down the column. The diligent solver colors in all the hieroglyphs that are in the puzzle, and realizes that the reason why you should be vigilant in the Valley of the Kings is because **MERTSEGER** is the protector of the valley.
