

# Forest Flora

by Karthika Muthuramu

**ANSWER:**  
**MOLY**

The solved map is below, with plants in purple and orange. After finding out where all the plants are, use the letters in their spaces to formulate the final clue. You'll need to experiment and select one plant per row to formulate viable words. There are a handful of rows with only 1 plant to help anchor the clue. The correct plants are marked in orange below, and spell "Odysseus' snowdrop". The final answer is MOLY, a magical herb given to Odysseus to protect him from magical spells.
