

# What are your Digits?

Kevin Babbitt

This puzzle is based on making words out of phone numbers. There are several web sites that automate this for you such as <http://www.phonespell.org>. Each number comes out to several possible words, but since the digits 0 and 1 don't generally map to any letters, the third phone number is a good place to start. The words we're looking for are as follows:

423-4384 => 42-FIFTH  
284-4735 => 2-THIRD-5  
368-7841 => FOURTH-1  
732-6639 => SECOND-9  
752-7826 => 7-LAST-26  
749-8422 => SIXTH-2  
634-7782 => FIRST-82

The puzzle title provides the next clue – that the words are indexes into the phone numbers themselves (the fifth digit of the first number, the third digit of the second number, etc.). Indexing in such a way yields a new phone number, 347-3626, which spells **FIREMAN**.
