

Measure Up

Christopher Eck

Difficulty: Easy

You are presented a postcard with 8 segments, each containing seemingly random shapes and a two digit number in a specific location. Also on the postcard is a feature unique to this particular postcard:

The title, Measure Up, is a hint to use this zip code bar as a ruler. An immediate hint that you're on the right track is that the ruler is the same size as a segment. Unfortunately, the ruler has no numerical indicators, though it is broken up into major divisions of 10 units each. Also of interest is that all segments save have positive numbers.

The next step is to realize that the numbers are a measure of the segments' location from a common start.

Laying these segments out according to their numbers will cause them to overlap:

With all segments laid out (and helpful delimiters placed between letters):

The answer is Escape Pod.
