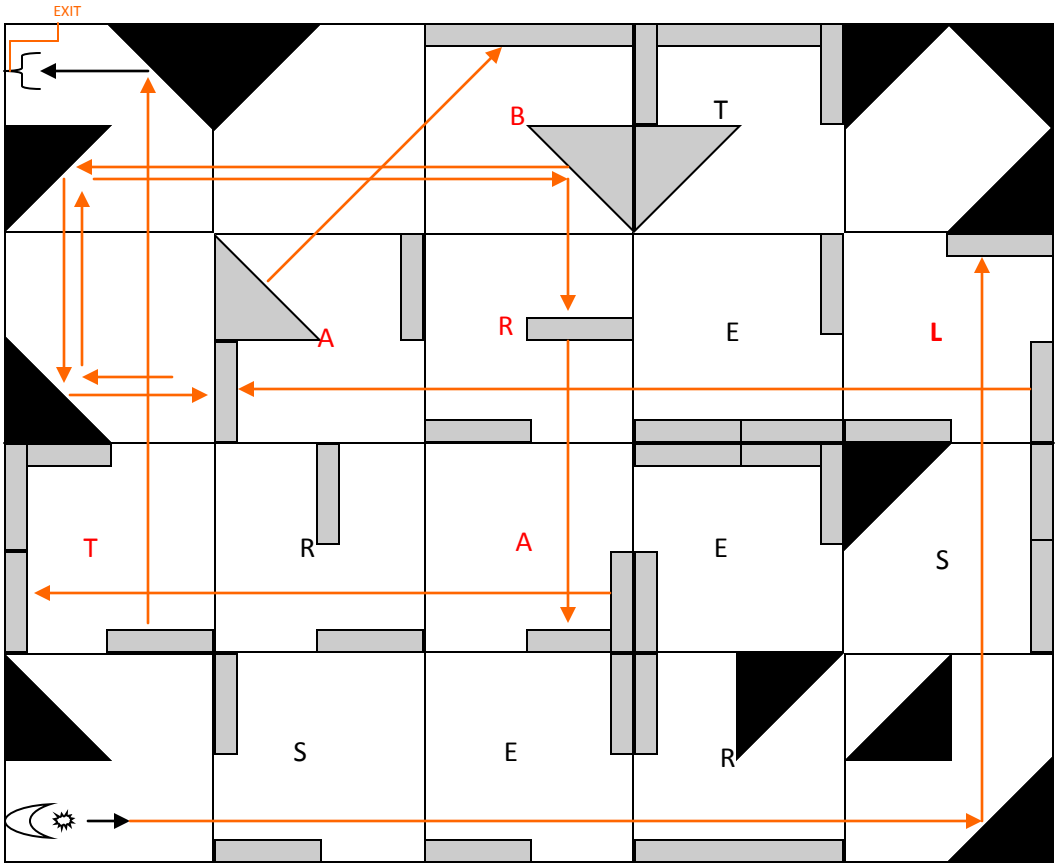
Solution to Portal

By Marc Popkin-Paine



The above arrows trace the path of the energy ball through the maze. For the grey triangles, if you go into or out of the angled side, you send the ball on a diagonal as directional momentum is conserved through the endpoints of the portal. From the end arrow, you should know that the energy ball ends going in a direct left direction so if you use one diagonal with a portal, you must use a second to straighten the path out.

If you look at the letters from only the rooms where a portal was used in order, you get labrat so the answer should be **LAB RAT**
