

Solution to Puzzle Carpal Tunnel

By Kolby Hoover

Solution guidelines:

- The first clue is the Doctor's Name (both Dr. Vorak or Andy Vorak), which is very similar to the alternate keyboard layout DVORAK.
- The second clue is the Notes field in the prescription—keywords *typing* and *qwerty*. This clue points you to the physical typing on a keyboard.
- The puzzle is the series of letters in the Drug field—a code.
- The solution to the puzzle is spelled graphically on the keyboard when typing the series of letters on a DVORAK layout keyboard. On your normal querty keyboard, connecting the dots between YNM makes and L.
- It is very easy to spell anything we want with this code, and the nice thing is that you can use a completely different series or number of letters to represent the same letter.
- The solution to this code is **PUZZLE**.
