

Resource consumption and by-products of raising massive amounts of cattle lead to environmental collapse.

This puzzle is a series of exercises in determining words based on a series of provided guesses, similar to the game of Bulls and Cows. Each numbered exercise represents a series of attempts to determine a different word. Some guidelines:

All guesses have the same number of letters as the mystery word. For each guess, a pair of numbers is listed.

The first number is the number of letters that match exactly — the correct letter in the correct position.

The second number is the number of letters that are correct letters in the target word but appear in an incorrect position in the guess. For example, a guess of "SUITE" for the word "SUPER" would result in (2, 1).

When the guesses in an exercise are combined, you should be able to determine the corresponding mystery word. Once you have completed all of the individual sets, you should be able to use all of those answers to determine two words that combine to form one final word.
