

Solution to Apocalypse Cow

By Randy Thomson

With a bit of logic, you should be able to determine the unique answer for each word set that meets the given constraints.

For the left column, this yields OX YAK ZEBU GENUS.

For the right column, this yields TEN CUBED TIMES TWO POUNDS

The taxonomic genus for oxen, yaks, and zebu (as well as common cattle) is **BOS**.

Ten cubed times two is two thousand, and two thousand pounds is a **TON**.

Combining the two results, we get the answer **BOSTON**.
