

Do It Rockapella — As she sneaks around the world, she was quite the stick-fingered filcher. Oh, and she's ruthless. She scanned a knave, yeah... but you won't have to worry about that. Sometimes these things just don't matter. But what does matter is the shortest distance between two points, and that means digging... lots of it. Because to follow her, you won't be sneaking *around* the world... You'll be *tunneling* through it. And although she took much as she travelled, you may only take the Great Letters on the Great Disk as you touch them. And once you take a Great Letter, you mustn't take it again.
Witness: Adam Liechty
